SAFETY

When designing any heat source, safety is always at the forefront. At Pacific Energy, we believe that with today's advanced technologies and materials, there's no need to compromise aesthetics for safety. That is why we've developed an integrated micromesh screen that creates a virtually invisible safety barrier, allowing a clear, unobstructed view of the flame as a standard feature for each model.

EFFICIENCY

Behind the legendary performance of Pacific Energy lies craftsmanship, experience, and next-generation technology. Large finned heat exchangers maximise heat convection while highly reflective baffles radiate heat. Heat output and flames are variable, allowing complete control of heating, comfort, and appearance.

DESIGN

Simple touch operation and temperature management

Each Pacific Energy Gas Fireplace comes with an advanced comfort remote control. Using a Smart thermostat, your fireplace can automatically modulate flame height to optimise temperature management and room ambience.

The Mirage represents the leading edge of freestanding design for small to medium spaces. The Mirage is beautifully clad with lustrous porcelain enamel offered in four solid colours: red, ivory, black and titanium. Inside each Mirage is a powerful engine; large formed finned heat exchangers result in high performance

heating efficiency while a highly reflective baffle and insulated interior firebox panels maximise temperature convection. A standard one-touch remote control simplifies operation; heat output and flame height are variable allowing complete control over heating, comfort, and appearance.

Absolute comfort with floor-level heat output

We all know hot air rises; so it makes sense to force hot air from the bottom rather than the top like conventional systems do. Thanks to the Mirage's unique floor level heat output system, you can maintain an ideal temperature from floor to ceiling. Sized for small to medium homes, define heating your living space with easy-to-use, high efficiency, contemporary elegance.

The Esprit linear gas fireplace offers Pacific Energy's highest level of quality, technical innovation, and engineering in a modern landscape design. For maximum heat and ultimate energy efficiency, the Esprit utilises large finned heat exchangers and standard one-touch remote controls to provide quick, easy control over heat and added energy savings. Even at the lowest settings, flames are appealingly rich and full to gently warm the room.

Create a fireplace that uniquely complements your home with Pacific Energy's exclusive Design-A-Fire system. Whether you

choose a dramatic landscape of fire over tumbled glass, or the gentle ambiance of a driftwood logset, your new gas fireplace offers an expansive view of flame set against a backdrop of reflective lustrous porcelain enamel liners, designed to enhance the stunning flames.

For nights you just want mood, the Esprit can run in flame only mode, or crank up the 6 speed fan to warm up on those colder nights. The internal lights bring your heater to life without adding extra heat.
